Laying the zip on the outside of the bag

Stitch the two pieces of outer fabric «closing side» with the H630. The grainy side is the one that contains the glue, put it in contact with the wrong side of the fabric. Iron on the right side of the fabric

Once the pieces are lined, fold the top one centimeter and iron firmly.

You will sew these two pieces on both sides of the zipper, flush with it. The fabric is facing towards you, as well as the closing.

Do the same thing with the other side. I advise you to open the zip, it will give more ease (and especially it will prevent you to forget later and not be able to return the bag).

For the back of the bag, it is more difficult because the straps may hinder you. I stuck them with a small clip and did not encounter any difficulty.

Now, go back and you will notice that the bag is already taking shape!
