Mounting from outside

Once the closure is put, the rest is a breeze. Fold the work in half and sew the sides first (stopping before the «square»)

Before sewing the base make sure the closure is open otherwise you will not be able to return the kit.

Sew the base (only the base for the moment) then fold the sides to form a kind of right angle and sew.

This will give a flat bottom to the kit.

Now you can return the kit, you will notice that it takes shape !
